DCIT 99 – INSPECTION, TRIPS AND SEMINAR Narrative Report Rubrics

Student Last Name:	Student First Name:
Professor: Joy M. Peji, MIT	Date of Submission:

CRITERIA	Highly Satisfactory Implemented 90-100	Satisfactory Implemented 80-89	Not Implemented 60-79	Score
Essay has an engaging beginning	Used a strategy in a creative way: dialogue, action, question, and interesting fact.	Fairly effective use of an engaging strategy	Attempted to use a strategy but the strategy was not very effective	
Essay is focused with a logical flow	Has a clear focus with essay details that support a creative, interesting, logical flow of events/uses transition words effectively	Has a focused topic with essay details that support a fairly logical flow of events; uses transition words	Could have missing parts that interfere with understanding; may be unfocused; rambling; few or no transition words	
Uses descriptive language: adjectives/vivid verbs/metaphor and/or simile	Used descriptive adjectives/ vivid verbs; effective metaphors/similes	Used enough adjectives., vivid verbs; at least one metaphor and simile	Used some but could have used more adj. and vivid verbs; ineffective or one metaphor or simile	
Had an ending/ conclusion showing reflection/insight	Great conclusion/ending! Wraps up narrative creatively and shows insight about the situation!	Fairly effective ending; some reflection	Confusing ending; does not effectively reflect back on the experience	
Conventions	Spelling, capitalization, punctuation, paragraphing and grammar are effective and make the paper easy to read and understand	Spelling, capitalization, punctuation, paragraphing and grammar are mostly correct. Errors do not make writing difficult to read or understand	Spelling, capitalization, punctuation, paragraphing and grammar create problems that slow the reader or cause confusion	
Presentation	Neatly written; recognized margins or typed with proper formatting, font size, etc.	Mostly neatly written; recognized margins. Mostly correctly typed.	Difficulty reading some parts of story; uneven margins. Formatting errors.

Off Campus Activities Reflection

The first seminar that I attended was on CISCO CCNA Security: ASA Firewall, site-to-site VPN and GRE Tunneling in Nexus Education given by Chris Buenaventura. He stated that many network administrators do not have the time or the expertise to implement one quickly. With implementation of site-to-site VPN with IPsec, you can use pre-shared keys instead of certificates when you create remote access and site-to-site VPN connections. All VPN client machines running the updated IPSec VPN client software can share a pre-shared key to establish site-to-site links. He also spoke on how traditional virus behavior is generally through email attachments.

Regarding the presentation topic, I was indeed surprised to find the latest trend in networking especially in creation of GRE Tunneling that involves creating a tunnel interface, which is a logical interface, and how to configure a CISCO ASA 5500 series firewall. Attending this kind of seminar with actual demonstration can be the first step for individuals wishing to obtain their Cisco Certified Network Professional or CCNP Security certification in which I dreamed of.

In response to the hard work that the group put into the seminar, I think everything worked out fine. Well organized, separating each section into clear parts, enabling participant to do the actual hands-on.

Below is the copy of my certificate since I did not take a picture.

The second is IT marathon conference, a "9th Information Technology Innovation Congress 2017 with the theme Upgrading IT Skills: A Key to Global Competitiveness" sponsored by EGLOBIO.

It was pointed out several interesting factors throughout the seminars. The topics includes Adobe Animate presented by Mr. Rollan Banez, Machine Learning by Prof.

Before Seminar starts.

Erwin M. Globio, Business Analytics by Prof. Edwin Loma, and Technopreneurship by Prof. Ernesto C. Boydon. For the four topics presented I had never realized to which extent to find so much information about upgrading IT skills can be competitive.

Presenters stated that IT infrastructure in the next few years expected to grow 10-30 times, which I find amazing.

At first, I was very skeptical about attending the seminar because I thought that it was going to be only about thing that really didn't interest me. I enjoyed this seminar I feel that it was very educational and interesting to participate in.

Talking about business analytics, Prof. Edwin Loma gave example about energy. When I asked about an energy crisis specially if there's heavy rain we cannot inevitable the brownouts, he stated that it is due to the distribution of the energy but necessarily the lack of it. Prof. Loma believes that in the future you are more likely to see smaller, local, distributed power plants rather than mega-sized plants. Another interesting thing he said was that a 4-15 millisecond blink in power will bring most equipment down.

The two-day 2017 1st International Conference on Redesigning, Re-Engineering Academic Direction for Global Competitiveness I attended was being organized by Adamson University. The international conference brings together different researchers, educators, professionals and graduate students from different countries to share their experiences, ideas, researches, and results in the field of Software Engineering, Incubation and Innovation, Health Science, Best Practices, and Business and Technology Education.

As we know, due to rapid change of technology the trend of education reforms moving towards and more important almost 42% job nature will be changed within 10 (ten) years that is why the world will have faced 42% shortage of skilled manpower as what I heard in the TV patrol news.

The international conference addressed the future world education rankings by country reflect an understating of what it means to be effective in terms on how education can put technology to its advantage. For example, education is considered as a fundamental element of human capital and human well-being, and thus a great contributor to the improvement of the quality of life. Development of new information and communication technologies and the consequent production and circulation of knowledge. To be globally competitive emerging threat for sustaining economic growth for both developing and developed world must be aim.

The international conference presented topics such as: 1) Incubation and Innovation with subtopics on Innovation and Entrepreneurship for Educators, Innovation and Entrepreneurship, and Management of Innovation; 2) New Business Ideas and Technology Applications with subtopics on e-Government, New Treatment Approaches, e-Commerce Business Models, Future Development of Business, Health Policies and Technologies, e-Business Application and Software, and Business Intelligence and Web Services; 3) Software Engineering with subtopics on Software Engineering as Applied to other Domain Disciplines, Methodological Aspects of Software Engineering Education, Cooperation in Education Between Industry and Academia; Exploring the Widespread Adoption of Mobile Device, Software Engineering in Non-Traditional Settings, Best Practices for Education and Training, Individual, Social, and Cultural Issues, Software and System Development, and Innovative Curriculum; and 4) Best Practices with subtopics on Pedagogy and Curriculum, Teaching and Learning Innovations, Technologies in Teaching and Learning, and Teaching and Learning in Higher Education. Invited plenary speakers are internationally renowned academicians and educators such as Dr. Imail D. Zain of the Universiti Sains Malaysia (USM), Mr. Takayuki Nakamura of the National Institute of Tecnology, Fukushima College in Japan, Dr. Abhiruj Chiangsom of Rangsit University in Thailand, and Ms. Diane Eustaquio, executive director of IdeaSpace.

The international conference shared what innovations can be done on time-tested processes, and what best practices shall be the way for us to move forward. It was very interesting and informative to hear and learn about the most influential people from other countries in the world. The conference not only allowed me to learn about other cultures and students, it also allowed me to

After certificates of attendance received.

understand various religions, economics, and statistics of the top countries that wish to contribute to develop new knowledge and replicable models that could be applicable to both develop and developing countries. My ability to use information that was given to me as well as being able to actively search and acquire and additional information that I needed to present my project soon in my thesis part 1. I was pleased to realize that I was extremely interested and intrigued about my own country and the specifics of society, economics, politics and religion.

All in all, I enjoyed myself at the conference because it made me look in an entirely different perspective.
